Tentative schedule for QCrypt 2016
Last modified August 9, 2016
24 contributed talks (including 3 merged talks)

Note: we need two poster sessions, because the venue doesn't have enough space to display all the posters at the same time

	Monday	Tuesday	Wednesday	Thursday	Friday
9:00	**Tutorial 1: Colbeck**	**Tutorial 2: Kashefi**	**Tutorial 3: Makarov**	**Bell test session: Hanson, Shalm, Giustina, Weinfurter**	**Tutorial 4: Peikert**
10:20	Coffee break	Coffee break	Coffee break	(until 10:40)	Coffee break
10:50	**Invited talk 1: Wilde**	**Invited talk 4: Kim**	**Invited talk 5: Jennewein**	(At 10:40) Coffee break	**Invited talk 8: Unruh**
11:25	#56 Simple and tight device-independent security proofs	#62 Rate-distance tradeoff and resource costs for all-optical quantum repeaters	#66 Quantum-limited Measurements of Signals from a Satellite in Geostationary Earth Orbit	(At 11:10) **Invited talk 6: Broadbent**	#32 Adaptive Versus Non-Adaptive Strategies in the Quantum Setting
11:45	#24 Zero-knowledge proof systems for QMA	#31 Continuous Variable Quantum Computing on Encrypted Data	#43 Time-bin encoding Along Satellite-Ground Channels	(At 11:45) #26 Quantum homomorphic encryption for polynomial-sized circuits	#14 Computational Security of Quantum Encryption
12:05	Lunch	Lunch	Lunch	Lunch	Lunch
1:40	**Invited talk 2: Pirandola**	**Industry session** (until 2:20)	**Free afternoon**	**Invited talk 7: Lo**	#90 Cross-phase modulation of a probe stored in a waveguide for non-destructive detection of photonic qubits
2:15	#49 A modulator-free QKD transmitter	(At 2:25) #83 New security notions and feasibility results for authentication of quantum data		#58 Quantum-proof multi-source randomness extractors in the Markov model	(At 2:05) #8 Information theoretically secure distributed storage system with quantum key distribution network and password authenticated secret sharing scheme

2:35	#18 77 day field trial of high speed quantum key distribution with implementation security	(At 2:45) (until 3:15) #13 Continuous-variable quantum key distribution with a "locally" generated local oscillator #37 Theoretical analysis and proof-of-principle demonstration of self-referenced continuous-variable quantum key distribution	#20 On quantum obfuscation	(At 2:30) #57 Integrated Silicon Photonics for Quantum Key Distribution #59 Wavelength-Division-Multiplexed QKD with Integrated Photonics
2:55	#36 Towards secure QKD with testable assumptions on modulation devices	(until 3:15)	#38 Breaking Symmetric Cryptosystems using Quantum Period Finding	(At 2:55) #52 Laser damage creates backdoors in quantum cryptography #69 Insecurity of detector-device-independent quantum key distribution
3:15	Coffee break	Coffee break	Coffee break	(At 3:20) Coffee break
3:45	**Invited talk 3: Englund**	**Poster session 1**	**Poster session 2**	**Hot topics session**
4:20	#16 Observation of quantum fingerprinting beating the classical limit	(until 6pm)	(until 6pm)	(until 4:45)
4:40	#44 24-Hour Long Relativistic Bit Commitment			
5:00	#73 Quantum teleportation over deployed fibres and applications to quantum networks			
Evening	**Public lecture**		**Conference dinner**
